RCH staff developed the Initial Study/Mitigated Negative Declaration in-house for the proposed Corporation Yard & Boat/RV Storage Project. The project includes the development of a corporation yard used as a headquarters for a general engineering construction company and engineering consulting firm and development of a boat and recreational vehicle storage facility. Areas of detailed discussion included aesthetics, biological resources, cultural resources, geology/soil, and stormwater drainage. RCH staff also prepared technical analyses for air quality, greenhouse gas emissions and noise. Mitigation measures were implemented to reduce all potentially significant impacts to a less-than-significant level.
